

1. Process file Test_task_1.csv using a script, in any programming language. Follow coding industry standards.

Formating rules:

- 1) Split the file into minimum number of new files so each file had only uniq id-s in it.
 - 2) All files must have a header.
 - 3) All commas must be replaced with a dot. Example: 4,5 -> 4.5 .
 - 4) Column Date must be formatted to dd-mmm-yy. Example: 21/08/2019 -> 21-Aug-19
 - 5) Column No skip values that are in format 20180615 , values in format dd/mm/yyyy must be stored if format yyyy-mm-dd. Example: 20180615 -> 20180615 , 15/06/2018 -> 2018-06-15 .
2. Add comments in file SQL_2.txt about whats it doing.
Visualize, the how part of the DB structure based on query. Can be done by hand and attached as a picture.
 3. Support ticket was created with description.

Unable to open application for offer AS6 with id 676. When opening the application error 500 appears.

Values are stored in DB in format. Applications with id-s 716 and 718 are correct and working as intended.

id	liabilities	income	amount
676	21,36	650	321,11
716	0	2000	4700.0
718	100.1	750	159.99

What would you do to fix the issue?

1. Quick solution
2. Permanent solution
